

## Soundbar Demonstration

Switch 4 soundbars using any digital/analog audio source in an expandable **ACCESS Ez™** demonstration system.

**T**he **Model 956** makes demonstrating soundbars easy. Soundbars present a challenge because they often have only one input. The 956 provides digital optical, digital coaxial, and stereo analog inputs, so no matter the flavor, every type of soundbar has audio. Audio Authority's demonstration systems combine multiple switch modules to create a custom solution that is effective, easy-to-install and easy to use.

Each self-contained **956** handles 4 soundbars and its modular form allows virtually unlimited numbers of soundbars to be demonstrated. To add capacity, add 956 modules. To add source switching, add a 954 module. Options for user interface include product select buttons, control panels, or a combination of interfaces.

### 956 FEATURES:

- Each module switches four soundbars
- Select speakers using control panel and/or buttons
- Use any source that outputs digital and analog audio
- Placement near demo products reduces installation costs
- Proudly made in our U.S. factory

Several styles of control panel or product select buttons are available.

### 956 Example System: Compare Eight Soundbars
