

In-Wall Audition Speaker Demonstrator

- Demonstrates up to eight speaker pairs
- Easy push button operation
- Includes power amp with remote volume control buttons
- All switching components are included for easy installation
- Other options and configurations available

Let your customers choose superior sound when they hear the difference well-crafted speakers can make. The In-wall Audition system is a high quality speaker switching system designed for showroom use. You provide an audio source and a wall full of speakers – all the switching equipment you need is included.

Audio Authority has been designing and manufacturing A/V demonstration equipment for retail showrooms for over 30 years. This system incorporates our exclusive technologies – SilenTouch™ and AutoDamping™. SilenTouch eliminates distracting clicks and pops by an automatic gain ramping sequence as you switch from one speaker to the next. AutoDamping optimizes your demo room by keeping all the speakers from acting as passive radiators. This keeps your demo room sounding “live.”

Audio Authority switching is the simple path to higher margin sales and a more satisfied customer.

IN-WALL AUDITION FEATURES:

- Eight red selector buttons included for easy customer-friendly operation
- Includes stereo power amplifier with remote up/down volume control buttons (green)
- Premium quality Access™ switching components with proprietary SilenTouch and AutoDamping technology
- The system is expandable to accommodate 16, 24, or any number of speaker pairs
- In-Wall Audition can also be used for outdoor, in-ceiling, or bookshelf speakers
- Source, receiver and/or subwoofer switching also available
- Made proudly in our own US factory
