## IR Flexibility for the AVAtrix™

LEXINGTON, KY., Sept. 17, 2007 - Audio Authority has designed an IR Injector for the AVAtrix and related products. The Model 1109 is an IR breakout device for up to six Audio Authority Cat 5 Wallplate/receivers. This product is designed to allow any wired IR device to send signals to or receive signals from IR devices plugged into the Wallplate receivers used in AVAtrix or SixDrive.

## Example Application

A typical application would involve multiple TVs in remote locations that must be turned on every day. The 1109 can be installed in the Cat 5e/6 pathway between the AVAtrix and the Wallplates. An IR device can then be connected to the 1109 IR jacks to inject IR control signals into the Cat 5 pathway leading to the Wallplates at the TV locations. The IR signals can be transmitted to the TVs via an IR emitter plugged into the Wallplate IR jack.

## 1109 Features

- Injects or extracts IR signals from Cat 5e/6 Wallplate bus
- Passive device, requires no power source
- Works with Cat 5 outputs from AVAtrix™ and SixDrive™ (AVX-561, AVX-661, 1170, 1171, and 1176)
- Works with any Audio Authority Cat 5 receiver including Models 9878, 9879, and 9880
- Each Wallplate IR pathway operates independently

MSRP: \$200.00 US. Available October 2007. For more information about the AVAtrix or SixDrive, visit [www.audioauthority.com](http://www.audioauthority.com) or call 800-322-8346.
