

Model C-1071

BlueBeam

IR to Bluetooth Converter

- Integrates the Sony PlayStation 3® into IR control systems
- Physical connection to the PlayStation 3 not necessary
- Two AA batteries included
- Advanced programming and macros via PC application

The C-1071 "BlueBeam" translates IR commands from a universal remote control to Bluetooth signals that control the Sony PlayStation 3. Works with any IR remote control capable of sending Sony PlayStation commands, including Logitech Harmony and Universal Remote Control remotes.

Enables all PlayStation 3 remote commands, including off/on. Choose the power option or combination of power sources that best fit your installation. Power options include two AA batteries, power via USB, or optional AC power supply (not included). The BlueBeam does not require a physical connection to the PS3.

The installation guide focuses on the Logitech Harmony remote, but other learning remotes or home control systems may be used. CCF files are available for other remotes at www.audioauthority.com/page/software.

MODEL C-1071 FEATURES:

- Allows full control of DVD/Blu-ray playback and power on/off
- Works with almost any programmable remote control
- Use the built-in infrared optical receiver or wired input*
- Innovative case design for small footprint and easy battery change
- PC software enables custom settings via a USB interface
- Configurable IR device code avoids conflicts with other Sony DVD players
- Firmware upgrade capable including Bluetooth upgrades
- Automatic low-power mode for extended battery life
- Low battery indicator LED
- Senses PS3 power on and off via USB connection
- Activity indicator for user feedback
- Custom macro capability for power off, etc.
