

# APPENDIX B: MODULE CONNECTION DIAGRAMS

The examples in the following pages focus on the basic connections for specific home audio and video products. In most cases, other variations are possible, and other drawings are available from your Audio Authority Account Manager.

## Audio Video Source

This layout applies to A/V sources (Laserdisc player, VCR, DVD, etc.) switched with the 950 module and/or any additional expander modules. For Sources with S-Video outputs (Laserdisc player, VCR, DVD, etc.), use the 960X expander. For Sources with AC-3 outputs, use only the 920XA expander. If the AC-3 source has an RF output, use the white RCA jacks, or if it is a digital (baseband) output, use red. Instructions for other types of Surround or Dolby Digital™ configurations are available if needed. Contact our Sales department at the phone number below.
