

Bypass Hookup: Signal Processor

To make your system capable of playing without a processor, turn on the "B" switch on the last module in the Processor Group (last address). Connect the *Low Level Bus from the Head unit group to the last 920 module of the Processor Group. Connect the 4th product position on each 920 and 920X module to the bus connections on the next module as shown. Continue the Low Level Bus to the 980 module from the last 920X.
