

HD Switching Redesigned

Introducing the new HDTV Signal Sensing AutoSelector™ Model 1154B

Model 1154B

**Now with IR remote control,
discrete input selection,
and all metal construction.**

Component Video and Audio Switching

The 1154B is the evolution of the legendary 1154A, bringing performance enhancements and new features. The 1154B retains the convenience of AutoSelect™ – a method of automatically switching sources – but adds IR remote control, discrete input selection, and an all new design.

The Design

An all metal casing encloses totally redesigned electronics. The 1154B features increased bandwidth over its predecessor, a streamlined jack arrangement, and easy toggling between AutoSelect and manual select modes. A new touch-sensitive keypad allows easy source switching and the elimination of mechanical buttons. The 1154B's satin finish aluminum faceplate and sleek design replaces the 1154A's plastic case, an update that makes the AutoSelector look as good as it performs. Padded feet prevent damage to other AV Components or furniture.

Functions

- Expands the component video input capacity of your HDTV or receiver
- Expands digital and analog audio input capacity of your receiver
- Automatically selects the active AV input
- Converts optical and coaxial signals automatically

Model 1154B

11"W x 6.5"D x 2.5"H

Performance

The 1154B boasts increased bandwidth over the previous model and is easily able to handle component video signals from 480i up to 1080p with no degradation. Digital optical and digital coaxial audio signals are automatically cross-converted internally, removing the need for outboard converters. Analog audio pathways preserve the full integrity of the original signal for optimum performance of your audio system.

Discrete input selection commands make the 1154B simple to control using universal remote control macros. A "credit card" type remote is included with the switcher. Gold-plated input/output jacks provide maximum signal integrity. Red and green LEDs show the currently selected source and the presence of audio signals on active inputs. All inputs are AC coupled to prevent DC offset and other compatibility problems with certain cable and satellite set-top boxes.

The 1154B AutoSelector is backed by Audio Authority's limited 1-year warranty and renowned commitment to customer service and satisfaction. Audio Authority invites you to put our thirty-plus years of AV design and manufacturing experience to work in your home theater with the high-performance, high-class 1154B.

Feature Overview

Items in **red type** are only available on the 1154B

- **All metal construction**
- **Discrete selectable inputs**
- Four AV inputs
- One AV output
- **Improved connector layout**
- High bandwidth component video
- Digital audio (coaxial and optical)
- Automatic digital audio conversion
- Stereo analog audio
- **Touch sensitive front panel controls**
- **IR remote control included**
- AutoSelect™ technology
- Manual selection override
- Made proudly in our own US factory

Model 1154A Component Video AutoSelector

For years, Model 1154A has been the ideal solution for using multiple sources with a single TV. The high bandwidth circuitry accepts YPbPr component video, stereo analog audio, and digital audio in both optical and coaxial formats, and switches all audio and video signals simultaneously when a new source becomes active.
