- Keypad can be customized for 1 to 16 lanes
- Lane camera up/down controls for video applications
- Convenient headset jack for wireless operation
- Privacy feature bypasses mic & speaker for headset use

1500A

Counter Station

Voice and Video Clarity

Audio Authority's Series 1500 family of intercom products is the culmination of decades of research and experience designing voice and visual communications solutions. The system relies on the 1500A Counter Station to provide both an easy interface for operators, and a way to expand and extend the intercom system. The keypad is durable, and easy to use, and its versatility allows the installer to assign any lane to any key, and match the lane key color to the pneumatic carrier. The keypad allows the operator to adjust inbound volume levels, choose ring tones, and tilt the lane camera in video-capable systems.

We designed the 1500A to produce the best sound quality in the industry using the built-in microphone and speaker, but users can also connect a wireless headset for better mobility. The Model 1500AH is a version of the 1500A that provides a convenient handset and cradle for private transactions.

Video capability can be added by installing a Model 1502L two-way video display, or the Model 1501L for inbound video. If a larger screen is required, the Model 1504 video adapter provides connections for a separate video display and camera.

Using the 1550A Setup Tool, volume levels and system configuration for the entire system can be adjusted from one of the Counter Stations.

MODEL 1550A SETUP TOOL

**Counter Station Dimensions:
Model 1500A with 1502 Video Display**

**Series 1500 Example:
1:1 Audio-Video Intercom System**

Even with all these features and options, the Series 1500 Intercom is still a snap to install. A single Cat 5 cable is all that is required to connect the Counter Station and the Customer Station. A wireless headset can be added to the Counter Station for convenient mobility. Two-way video is simple to add to any system with no additional wiring.

**Model 1547B IR Traffic Sensor connects to a knockout port on the side of the 1520. 3rd Party Traffic Sensors connect to the main terminal block.*
