

1580 Intercom Kit

Simple Solutions for Drive-up Communications

The 1580 Series is a complete solution for one teller or pharmacist to communicate with one or two drive-up lanes. Designed to minimize cost for simple drive-up applications, it incorporates the great features and sound quality of our versatile 1500 Series in a cost effective design. The 1580 Counter Stations connect directly to a special 1583 Dual Lane Station via Cat 5/6 for easy installation.

Two different Counter Stations are available:

- Kit 1580S includes a 1580 Counter Station plus a 1583 Dual Lane Station.
- Kit 1580HS adds a teller handset with auto-privacy feature to the package.

The 1580 Series is functionally the same as our 1500 Series Intercoms, so no additional operator training is required. However, its wiring is unique, so it cannot be mixed with 1500 Series Counter Stations, Lane Stations, or Hubs.

Features:

- Excellent two-way audio performance
- Intuitive lane selection with volume up/down controls
- Lane camera up/down controls for video applications
- Durable, easy to clean, touch-sensitive keypad – no moving parts
- Privacy feature bypasses mic & speaker when headset or handset is in use
- Shielded Cat 5 cable to lane devices preserves audio quality
