Demonstration Controller

DLNA® Audio Demonstrations – with Video Sync

Features:

- Compact demo controller with video and audio output
- Eight ports for illuminated push-buttons
- HDMI® port for synchronized 1080p video output
- Store demo media files on a USB drive (not included)
- Silent mode triggered by timer

As more consumer audio manufacturers join the Digital Living Network Alliance (DLNA), many retailers are looking for a turn-key system to demonstrate streaming audio. The Audio Authority® 1707 is a versatile platform that can play video via HDMI and simultaneously stream audio to DLNA devices. It can be customized for specific content and behavior like the demo for Yamaha® speakers below.

1707 Example System: Yamaha DLNA Speakers

This application shows a demo for up to six Yamaha DLNA speakers. Press a Demo button to activate the audio-video demonstration for a speaker. Press the volume up or down buttons to control the audio level. Press another product Demo button to start another presentation. The 1707 timer starts a silent video after a set period of inactivity to attract the next customer.

Illuminated push-buttons
