

Premium Headphone Demonstrations

MODEL 1710N
(BOARD LEVEL)

High Fidelity Amplification

Using customer's music to demo headphones often closes the sale, and the Audio Authority® 1710 headphone amp makes it easy. Simply provide a 3.5mm cable and the system does the rest. When a customer connects their MP3 player, the 1710 detects music on the customer input and overrides the house music source.

The 1710 allows you to design the right experience for your retail environment. Make selling stations of four headphones each, or restrict live demonstration to one pair of headphones at a time in the entire system.

FEATURES:

- High fidelity headphone amplification to showcase premium headphones
- Flexible behavior allows switching or distribution systems
- Retail-hardened selector buttons are user friendly, and withstand heavy use
- Demonstrations can be set to time out after a few seconds, minutes, or never.
- Automatic selection of customer audio source when connected and playing
- Theft detection and integral alarm
- Multiple units can easily be connected together for any size system
- Optional steel case for use in exposed locations

MODEL 1710
(ENCLOSED)

Optimal steel cover protects the switcher from damage and provides clear labeling for the connections.
