

# 1725A

## Digital Soundbar Demonstrator

### Effective Soundbar Demonstrations

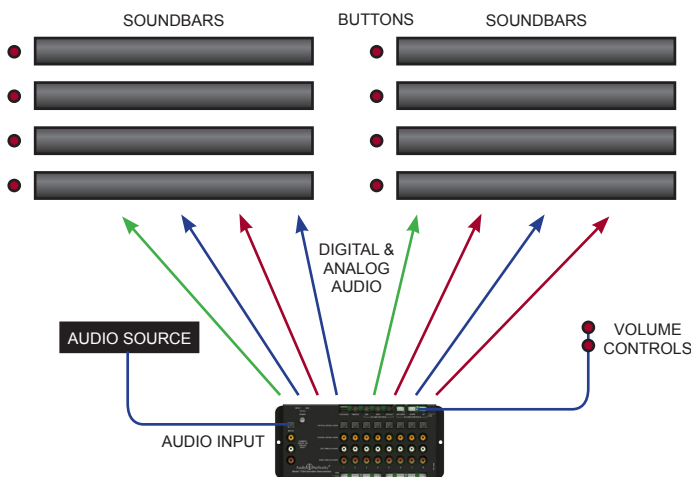

The Audio Authority® 1725A provides digital optical, coaxial, and analog audio signals to eight soundbars. It automatically converts any input signal to the other audio formats, so one input connection is all you need. Add a master volume control so customers can adjust volume between the minimum and maximum settings using up and down buttons or a rotary encoder knob. When activated, master volume returns to the default level after an adjustable idle period to avoid “employee fatigue.”

- One source feeds digital and analog soundbars
- Keeps soundbars awake and ready to demo
- Master volume control
- Adjustable demo timeout

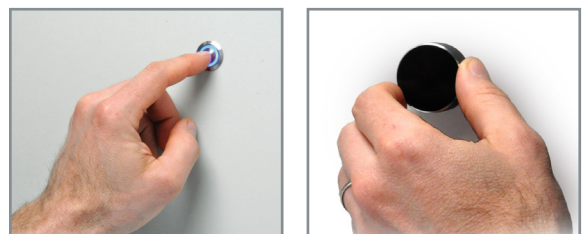

### 1725A Example System: Compare Eight Soundbars

This system configuration switches up to eight soundbars using one audio source. Customers simply press the button next to each soundbar and adjust master volume using up and down buttons.

### Features:

- Each module demonstrates up to eight soundbars
- Keep-awake prevents soundbar sleep mode
- Durable buttons for volume and product selection
- Source input can be digital (PCM) or analog audio
- Optical, coaxial, and analog audio to soundbars
- TV demo mode toggles each position between TV sound and soundbar - visit website for details

Easy to use, durable controls invite customer interaction. Master volume control features are compatible with up / down buttons or rotary encoder knob.
