

Low-Level Switching Module

Switches low-level subwoofers, stereo sources or car audio head units in an expandable ACCESS™ demonstration system.

The Model 922 switches up to four stereo or mono low-level audio signals to demonstrate powered subwoofers, low-level stereo sources, iPods, and car stereo head units. As part of an Audio Authority® AccessEZ™ audio and video demonstration system, the 922 can be expanded to switch between high current car amplifiers by using the 949X High Current Amplifier Expander.

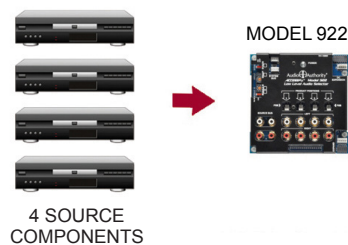

Use a 922 module for every four subwoofers, CD players, iPod docks, A-V receivers, or car stereo head units you include in your switching system. Expand the number of components by adding 922 modules.

Features:

- Each 922 module switches four low-level stereo or mono source components
- Each 922 module switches four powered subwoofers
- Add 922 modules for capacities of 8, 16, 24, or more
- For home or mobile audio demonstration
- Add a 949X module to demonstrate high current car amplifiers
- Simple setup and integration
- Dimensions (H-W-D): 5 x 5 x 1
- Proudly made in our U.S. factory

Example Systems:

Switch up to four source components with each 922 module.

Switch up to four powered subwoofers with each 922 module.
