

932

Speaker Switching Module

Switch up to eight speakers in each channel with 932 modules in an expandable AccessEZ™ demonstration system.

The Model 932 makes demonstrating speakers in multi-channel surround and mobile audio systems easy by locating the switching module close to the demonstrated products, dramatically decreasing installation costs. An Audio Authority® AccessEZ™ Demonstration Network combines specific product group modules to create an effective, easy-to-install switching system for your showroom.

Each self-contained 932 handles eight speakers in one channel and its modular approach allows virtually unlimited numbers of speakers to be demonstrated. One 932 switching module is required for each channel of a multichannel setup. (Two 932s are required for eight stereo speaker pairs, for example.)

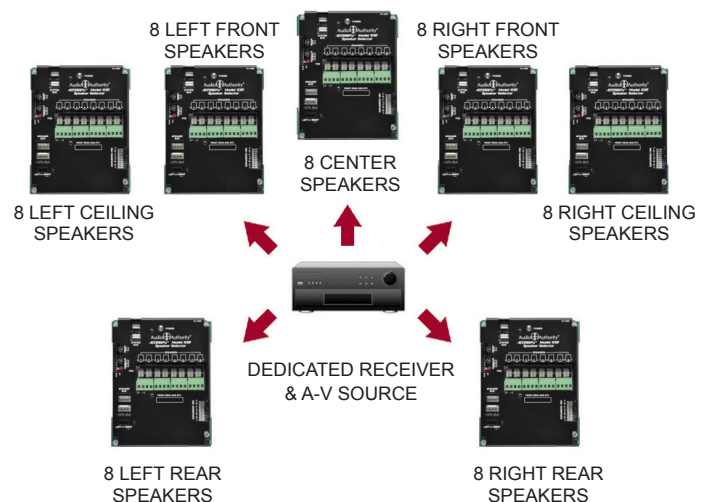

Features:

- Each module switches eight speakers in one channel
- Select speakers using control panel and/or buttons
- Unique AutoDamping™ circuit improves showroom acoustics by eliminating sympathetic vibration
- SilenTouch™ gain ramp circuitry eliminates distracting clicks and pops to provide smooth transition.
- Module placement near demo products reduces installation costs
- For both home and mobile audio demonstration
- Proudly made in our U.S. factory

Example System:

Dolby® Atmos™ 5.1.2 Demo System

This system configuration switches up to eight speakers in each channel (front, center, ceiling (ATMOS) and rear speakers). Left/right pairs are selected together.

The optional 932X expands the 932 by adding eight speaker positions to the 932 module. This module is useful in surround sound speaker package demonstrations.
