

Amplifier / Receiver Switching Module

Switches low-level, 2-channel input and high level, 2-channel output in an expandable ACCESS™ home or mobile audio demonstration system.

The Audio Authority® Model 942 provides low-level 2-channel input and high-level 2-channel output switching for up to four receivers or amplifiers (less than 200 watts RMS). The 942 can also be used to switch 2-channel car audio head units with low level inputs and high level outputs. In addition, the 942 can bypass the amplifier group and route high-level head unit signals directly to speakers.

Features:

- Each 942 module switches up to four 2-channel receivers or amplifiers (under 200 watts RMS)
- Switches low-level 2-channel input and high-level 2-channel output
- Switches car audio head units with low-level and/or high level output
- Includes amplifier bypass feature to enable high power head unit demonstrations
- For home or mobile audio demonstration systems
- Simple setup with other system components
- Dimensions (H-W-D): 5 x 7 x 1
- Proudly made in our U.S. factory

Example System:

Switch up to four amplifiers or receivers with each 942 module.
