Access™
956B
Digital Soundbar Demonstrator

Soundbar Demonstration

Switch four soundbars using any digital or analog audio source in an Access™ system.

The Audio Authority® Model 956B is your assistant for effective soundbar demonstrations. Design your demo with any level of complexity – from two channel stereo demos to multi-channel sound with Dolby®, DTS™, or any Bitstream or PCM source signal. Soundbars present a challenge because they often have only one audio connection. The 956B provides digital (Toslink®) and stereo analog connections so any soundbar can be connected to the demo system.

One 956B handles four soundbars and the system allows virtually unlimited numbers of soundbars to be demonstrated. Options for user interface include product select buttons, control panels, or a combination of interfaces.
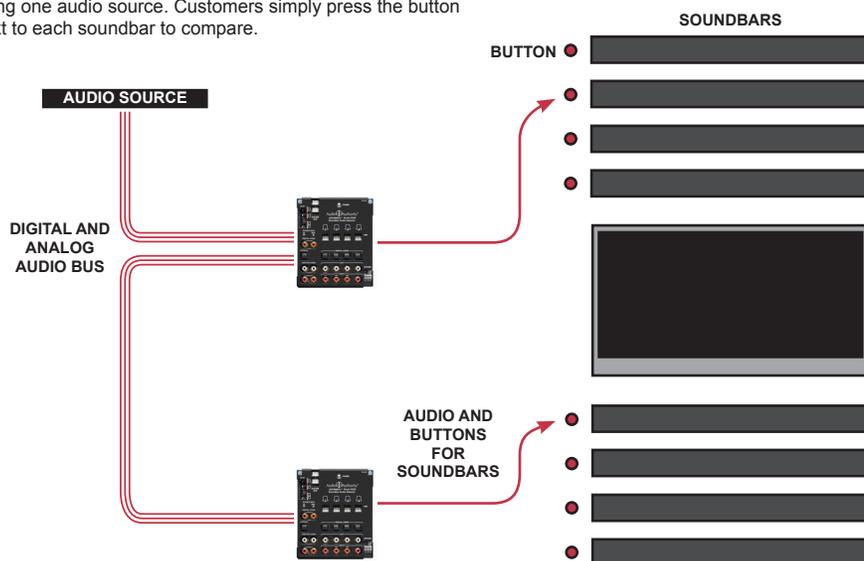

Features:

- Bitstream audio (all Dolby® and DTS formats)
- Digital audio and/or analog audio
- Select soundbars using control panel and/or buttons
- Expand the system with AccessEZ™ modules
- Digital and/or analog audio connection from source
- Coaxial digital source signal is converted to optical
- Optical source signal is converted to coax for bus

956B Example System:
Compare Eight Soundbars

This system configuration switches up to eight soundbars using one audio source. Customers simply press the button next to each soundbar to compare.

Several styles of product select buttons and control panels are available.
