

## Handle Kit for Anderson SB50 Plug

The Model 670-420 Handle Kit encases the common Anderson SB50 power plug to provide a rugged handgrip for temporary DC power applications such as battery charging. Its ABS plastic case features internal wiring guides for strain relief. These are sized for 16-gauge insulated wire, but can be easily enlarged to accommodate wire pairs up to 10 AWG for higher current applications. Smaller gauge wire pairs can be tied or otherwise bound to prevent passage through the strain relief channels.

SB50 CONNECTOR  
SOLD SEPARATELY

## Model 670-420 Instructions

- Insert the nuts (1) into the indentations on the bottom half of the shell, and flip over onto a flat surface, using a flat object to keep the nuts in place.
- Place the wired SB50 (2) in the shell, rounded part up, and place the spacers (3) on the screw holes.
- Place the top shell (4) onto the assembly, and insert the screws (5) into the SB50 holes. Hand-tighten screws until snug. Do not overtighten.
